PAGE 13 — FEDERAL ACQUISITION PATHWAYS & CONTRACT VEHICLES

PAGE 13 — FEDERAL ACQUISITION PATHWAYS & CONTRACT VEHICLES

(NI-AI Government Pack — Page 13)

NI-AI Federal Acquisition Pathways & Contract Vehicles

How NI-AI legitimately enters U.S. government procurement channels.

This is designed to show the government that NI-AI **knows how to be bought**, which is one of the strongest credibility markers you can present.

1. Direct Federal Grant Pathways (Non-Contract)

NIH SBIR/STTR (Phase I & II)

- Supports neurotechnology, AI systems for health, autism-support technology.
- NI-AI aligns with:
 - Smart cognitive interfaces
 - ASD-support tools
 - AI-driven behavioral systems
 - Adaptive authentication for health data

NSF SBIR

- For advanced AI frameworks.
- NI-AI fits criteria for:
 - Next-gen machine reasoning
 - Cognitive stabilization
 - Multi-thread coherence engines
 - Assistive technologies

DoE Grants

- AI systems improving infrastructure and computational intelligence.
 - NI-AI qualifies under:
 - Secure authentication
 - High-integrity AI systems
 - National energy resilience through AI
-

2. Federal Contract Vehicles (Entry-Level)

 These are the fastest ways for NI-AI to start receiving federal payments.

Micro-Purchase Threshold (MPT)

- Any agency can buy NI-AI **without competition** up to **\$10,000**.
- Perfect for demos, pilots, or a single-license EchoAuth deployment.

Simplified Acquisition Threshold (SAT)

- Up to **\$250,000** with limited competition.

- Ideal for NI-AI pilot programs installed into a federal clinic, school, or cybersecurity unit.

Purchase Cards (GPC)

- Government cardholders can pay instantly.
 - NI-AI can be purchased like a SaaS subscription under this channel.
-

3. Prime Contract Pathways (Advanced)

GSA MAS (Multiple Award Schedule)

- The main government "storefront."
- NI-AI could be listed under:
 - AI Solutions
 - Cybersecurity
 - Human Performance
 - Behavioral Analytics
 - IT Services
 - Education & Training Technologies

NIH CIO-SP4

- Big one.
- Covers AI, biomedical tech, clinical support systems, analytics.
- NI-AI fits 100%.

NASA SEWP-VI

- Federal-wide. Used for AI, IT, and advanced R&D software.

- NI-AI is aligned with:
 - Next-gen cognition engines
 - Secure authentication
 - AI-assisted research
-

4. Subcontracting Channels (Fastest Federal Money)

Large primes LOVE subcontracting niche technologies like NI-AI.

Examples:

- Booz Allen Hamilton
- SAIC
- Leidos
- Northrop Grumman
- Raytheon
- Palantir
- Lockheed Martin
- Accenture Federal

NI-AI fits perfectly as a:

- Cognitive AI module
- Secure authentication layer
- Neuro-adaptive interface
- Autism-supportive AI
- AI stability engine

Subcontracting gets you:

- No competing against giants
 - Faster award
 - No need for huge certifications upfront
 - Prime contractor does the heavy lifting
 - You get funding, validation, and federal footprint
-

5. OTA (Other Transaction Authority) — Rapid Innovation Pathway

Extremely powerful.

NI-AI can be awarded **without normal procurement rules** under DHS, DoD, HHS, NASA, or DOE.

Used for:

- Breakthrough AI
- High-risk/high-reward prototypes
- New authentication systems
- Neuro-adaptive technology
- Cognitive-support systems

This is how companies get **\$3M–\$20M** awards fast.

NI-AI is a perfect fit.

6. Vertical Fit Summary (One Line per Agency)

NIH

AI neuro-support, autism cognition, medical authentication.

NSF

Next-generation reasoning engines and coherence models.

DoD

High-stability AI for warfighter support, authentication, and cognitive load regulation.

DHS

Identity security, authentication resilience, behavioral pattern matching.

DOE

High-integrity computational AI for infrastructure and national resilience.

VA

Autism support, veteran PTSD tools, cognitive AI assistance.

7. NI-AI “Buyability Statement” (Extremely Important)

“NI-AI is purchasable through MPT, SAT, GSA MAS, OTA, or direct SBIR/STTR mechanisms, enabling rapid deployment to any federal agency requiring stabilized AI cognition, adaptive authentication, or neuro-supportive human-machine interfaces.”

This sentence establishes:

- authority
- readiness
- legitimacy
- compliance
- eligibility

It’s exactly what federal reviewers want to see.
